2012

Selected Projects: ⦿ github.com/tdnicola

Healthy Potatoes App   Code   Website
MERN stack (MongoDB, Express, React, and Node.js) using password hashing for CRUD methods. Pulls movie/director information from MongoDB API. Allows you to change user information as well as favorite/remove movies once logged in. Hosted on Heroku.

Pokedex   Code   Website
jQuery website that pulls and displays data on different Pokemon from pokeapi.co.

Discord bot   Code
Discord bot that when given commands will: insult friends, praise friends, random gif, or search for a gif through various APIs. Uses OOP to query/update postgreSQL database for stats. Built with Node.js.

Meetup   Code   Website
Serverless PWA built with React using TDD/BDD/End-to-End testing. Application uses the meetup API and AWS. Data visualization where applicable.
